

Student Club Event Ticketing & Budget Portal

1. Requirements Table

ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow Club Leads to submit event proposals containing event name, description, date, expected attendees, and estimated budget.	High	A Club Lead can enter all required details and submit the proposal. The system generates a unique proposal ID and changes its status to Pending Faculty Approval .	Provides a standardized method for clubs to propose events.
FR-002	Functional	The system shall route submitted event proposals through a multi-stage approval workflow involving the Faculty Coordinator, Finance Officer, and Dean.	High	The proposal moves sequentially from Faculty Coordinator → Finance Officer → Dean after successful approval at each stage. Rejection at any stage changes the status to Rejected and records the reason.	Ensures university events receive proper authorization and financial review.
FR-003	Functional	The system shall allow authorized users to view and track the status of event proposals and budget requests.	Medium	Club Leads can view their own proposals and see statuses such as Pending, Approved, Rejected, or Budget Allocated. Approvers can view proposals assigned to their approval stage.	Provides transparency and prevents users from having to manually track approvals.
FR-004	Functional	The system shall generate a unique QR-code ticket for each registered attendee of an approved event.	High	After successful registration, the system generates a unique QR code linked to the attendee and event. Duplicate tickets cannot be generated for the same registration.	Enables secure and efficient event entry management.

ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-005	Functional	The system shall allow authorized event staff to scan and validate attendee QR-code tickets at the venue.	High	A valid unused QR code is accepted and marked as checked-in. Invalid, expired, or already-used QR codes are rejected with an appropriate message.	Prevents unauthorized entry and duplicate use of tickets.
NFR-001	Non-Functional — Performance	The QR-code validation API shall process and return a ticket validation response within 100 ms under normal operating conditions.	High	During performance testing, at least 95% of QR validation requests receive a response within 100 ms.	Fast validation is required to prevent queues at event entrances.
NFR-002	Non-Functional — Security	The system shall ensure that only authenticated and authorized users can access administrative functions and approval workflows.	High	Users without the required role cannot access restricted pages or perform restricted actions. Unauthorized requests are rejected.	Protects university financial information and approval processes.
NFR-003	Non-Functional — Reliability	The system shall maintain ticket and approval data consistently during concurrent usage.	Medium	Concurrent registrations and QR scans must not result in duplicate ticket IDs or multiple successful check-ins for the same ticket.	Prevents data inconsistencies during high-attendance events.

2. UML Use-Case Diagram

3. Use-Case Flow Specification

Use Case: Submit and Approve Event Proposal

Use Case ID

UC-01

Use Case Name

Submit and Approve Event Proposal

Primary Actor

Club Lead

Supporting Actors

Faculty Coordinator, Finance Officer, Dean

Preconditions

1. The Club Lead has a valid account.
2. The Club Lead is associated with an authorized student club.
3. The Club Lead is logged into the system.
4. The event proposal form is available.

Postconditions

On Success:

- The event proposal is stored in the system.
- The proposal receives a unique ID.
- The proposal is approved by the Faculty Coordinator, Finance Officer, and Dean.
- The event status becomes **Approved**.
- The requested budget is marked as approved.

On Failure:

- The proposal remains in the system with a **Rejected** status.
- The rejection reason is recorded.
- The Club Lead can view the rejection reason.

Main Success Scenario

1. The Club Lead logs into the Student Club Event Ticketing & Budget Portal.
 2. The Club Lead selects **Create Event Proposal**.
 3. The system displays the event proposal form.
 4. The Club Lead enters the event name, description, date, expected attendance, venue, and estimated budget.
 5. The Club Lead submits the proposal.
 6. The system validates all required information.
 7. The system creates a unique proposal ID.
 8. The proposal status is changed to **Pending Faculty Approval**.
 9. The Faculty Coordinator reviews the proposal.
 10. The Faculty Coordinator approves the proposal.
 11. The system forwards the proposal to the Finance Officer.
 12. The Finance Officer reviews the requested budget.
 13. The Finance Officer approves the budget.
 14. The system forwards the proposal to the Dean.
 15. The Dean reviews the complete proposal.
 16. The Dean provides final approval.
 17. The system changes the proposal status to **Approved**.
 18. The Club Lead receives a notification that the event has been approved.
-

Alternate Flow

A1 — Faculty Coordinator Rejects Proposal

1. The Faculty Coordinator reviews the submitted proposal.
2. The Faculty Coordinator selects **Reject**.
3. The Faculty Coordinator enters a rejection reason.
4. The system records the rejection reason.
5. The proposal status changes to **Rejected**.
6. The Club Lead is notified of the rejection.
7. The workflow terminates.

A2 — Finance Officer Rejects Budget

1. The Finance Officer reviews the requested budget.
2. The Finance Officer determines that the requested amount is not acceptable.
3. The Finance Officer rejects the budget and provides a reason.
4. The system records the rejection reason.
5. The proposal status changes to **Rejected**.
6. The Club Lead is notified.
7. The workflow terminates.
